

Hand hygiene is the single most important method of preventing & controlling infection.

The hands normally have a "resident" population of micro-organisms. Other micro-organisms are picked up during every-day activities, and these are termed "transient" organisms.

Many infection control problems are caused by these transient organisms.

Hand washing with soap & warm water should remove these transient organisms before they are transferred to surfaces, another patient or to a susceptible area on the same patient.

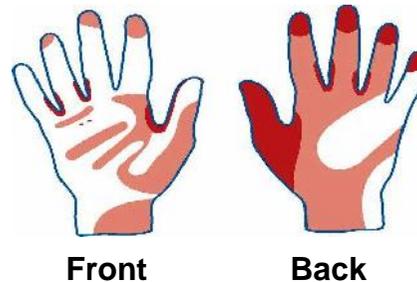

In addition to washing with soap and water an alcohol rub will increase the removal of transient bacteria and should be used prior to clean or aseptic procedures, e.g. dressing changes, giving injections.

Using an alcohol rub is a useful alternative when the hands are not visibly dirty, or when adequate hand washing facilities are not available.

It is important that hand washing is carried out correctly to prevent the spread of infection.

Studies show that health care staff frequently use poor hand washing techniques and the most commonly neglected areas are the tips of the fingers, palm of the hand, and the thumb.

Areas of hands frequently missed

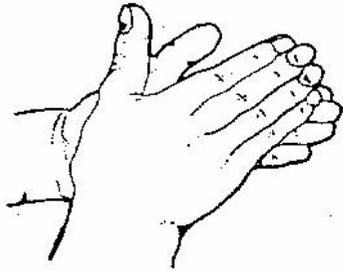

Good practice

- Fingernails should be kept Clean and short
- Do not apply nail polish, wear Jewellery or wrist watch.
- Breaks anywhere on the skin should be covered with a waterproof dressing.
- Medical advice should be sought for skin damage caused by other medical conditions e.g. eczema

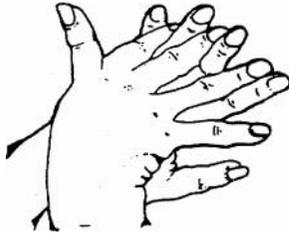

When should Hands be washed?

- After visiting the toilet
- Before handling food
- When the hands are visibly soiled.
- Before a 'clean' procedure.
- After a 'dirty' procedure, even if gloves were worn
- Between care episodes for one patient.
- Between different patients

Hand Washing Technique:
Wet hands and apply soap

1. Palm to palm

2. Right palm over left dorsum and left palm over right dorsum

3. Palm to palm fingers

4. Backs of fingers to opposing palms with fingers interlocked

5. Rotational rubbing of right thumb clasped in left palm and vice versa

6. Rotational rubbing, backwards and forwards with clasped fingers of right hand in left palm and vice versa

Also, wash wrists
Dry hands thoroughly

Equipment needed for effective hand washing

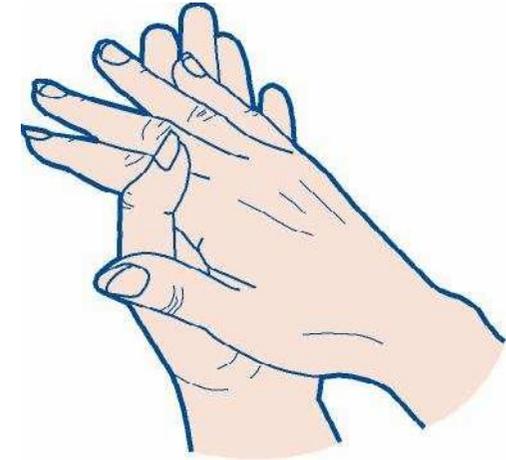

Wash hand with soap
Disposable paper towels
Pedal bin

Method of applying an alcohol hand rub

When using an alcohol rub, the preparation should be rubbed into all areas of the hands, again paying attention to the thumbs, fingertips, between the fingers and the backs of the hands (see diagram 1) until the hands feel dry. Sufficient must be used to treat all areas of the hands.
